Professional Summary

Full-stack developer with experience delivering production web applications for international research and policy organizations across Nepal. Skilled across React/Next.js, Django/Node.js, and PostgreSQL, with hands-on ownership of deployment and server infrastructure (Docker, Nginx) from development through production. Comfortable working end-to-end: system design, UI/UX, and the DevOps needed to keep it running reliably.

Technical Skills

Frontend: React.js, Next.js, Tailwind CSS, JavaScript, HTML5, CSS3

Backend: Django, Node.js, Frappe/ERPNext, RESTful API design

Databases: PostgreSQL, MySQL, MongoDB

DevOps & Infra: Docker, Nginx, Linux, Git

Data & Visualization: Leaflet.js, Chart.js, GeoJSON, interactive dashboards

Other: SEO optimization, Google Analytics, UI/UX design, Agile methodologies

Languages: English (professional), Nepali (native)

Professional Experience

Geofinity Solution Pvt. Ltd.

Baluwatar, Nepal

Software Developer

Sep 2024 – Nov 2025

- Built and shipped responsive, high-performance web applications end-to-end, from UI design through production deployment
- Owned server infrastructure for multiple production applications — deployment, monitoring, and maintenance on Linux using Docker, Nginx.
- Improved site visibility and user engagement by implementing SEO strategy and analytics tracking (Google Analytics)

Key projects:

- **Nepal Budget Analysis Platform** — Interactive data visualization application for exploring Nepal's national budget by sector, district, and fiscal year, built with React, Leaflet.js, and GeoJSON; UI designed to make complex budget data accessible to both policymakers and the public
- **DidikiAwaaz** — Survey platform for educational and social research targeting rural households, with a React frontend and an OpenRosa-compatible, offline-first backend (Enketo Express) supporting thousands of concurrent users
 - Built real-time dashboards giving researchers and policymakers live visibility into survey data

Pahadi Research LLC

Remote

Research Fellow

Dec 2023 – Feb 2024

- Completed a 2-month fellowship in enterprise software development, building RESTful APIs in C# with an emphasis on unit testing and engineering best practices
- Applied C#, Flutter, and MySQL across practical project implementations, including cross-platform mobile development with Flutter

Academic Projects

Major Project: Leaf Disease Prediction System — Computer vision system using convolutional neural networks to automatically detect and classify plant diseases from leaf images.

Minor Project: AI-Powered Image Colorization — Deep learning model for automatic colorization of grayscale flower images.

Education

Advance College of Engineering and Management (ACEM)

Lalitpur, Nepal

Bachelor of Engineering in Computer Engineering

2019–2024

CCRC

Nepal

Higher Secondary Education (Science)
